

I have the D-link i2eye Video Phone and the staff at Gallaudet University are unable to reach me because they do not have my ip host name and I have not been able to reach them because I don't know if they have an ip name. I've been told that the only Video Phones on campus are the Sorenson VP-100. Since the VP-100 and the D-link i2eye are not interoperable, the students and staff at Gallaudet University are unable to contact other people like me who use the D-link i2eye and likewise deaf and hearing people who have the D-link i2eye are unable to reach the Gallaudet University staff via the NANP (North American Number Plan).

Please act to correct this non-interoperability situation by either requiring that all current and future Video Phones be interoperable via the NANP and until this is done, at least order Gallaudet to have the D-link i2eye installed and easily available for their staff and students. The current system is oppressive to the communication needs of deaf and hearing people who have different Video Phones that are not interoperable with the Video Phones currently at Gallaudet University.
